FULL PERFORMANCE WHEN IT IS NEEDED THE MOST

When it gets serious, you need to rely on your equipment.

The Kemper Pick-ups C30 and C35 make no compromises. With full power, clean work, and maximum reliability. No matter how the windrow lies or what the weather is like. These pick-ups are built for professionals who demand results. In tight time windows and under tough field conditions, both models deliver consistent performance and keep you moving. Precision engineered for high throughput and minimal losses, they turn every pass into a clean cut. Trust in technology that does not just meet expectations. It exceeds them. The Kemper Pick-ups C30 and C35 are ready when you are.

POWERFUL PERFORMANCE FOR A CHALLENGING HARVEST.

Get the MOST out of your forager! The Kemper C30 / C35 pick-up was designed specifically for CLAAS foragers. All components are extremely robust. Any high-performance forager can be utilized to its full potential, even when used to harvest wet crops in irregular windrows. Just push the drive lever forwards and find out how hungrily this new pick-up swallows your crop without the slip clutch ever tripping!

KEMPER PICK-UPS SIMPLY POWERFUL.

Get the most out of your forager!

Even crop flow

Patented auger design: The flighting opens up towards the center to deliver a constant flow of crop.

Yield boosting crop flow

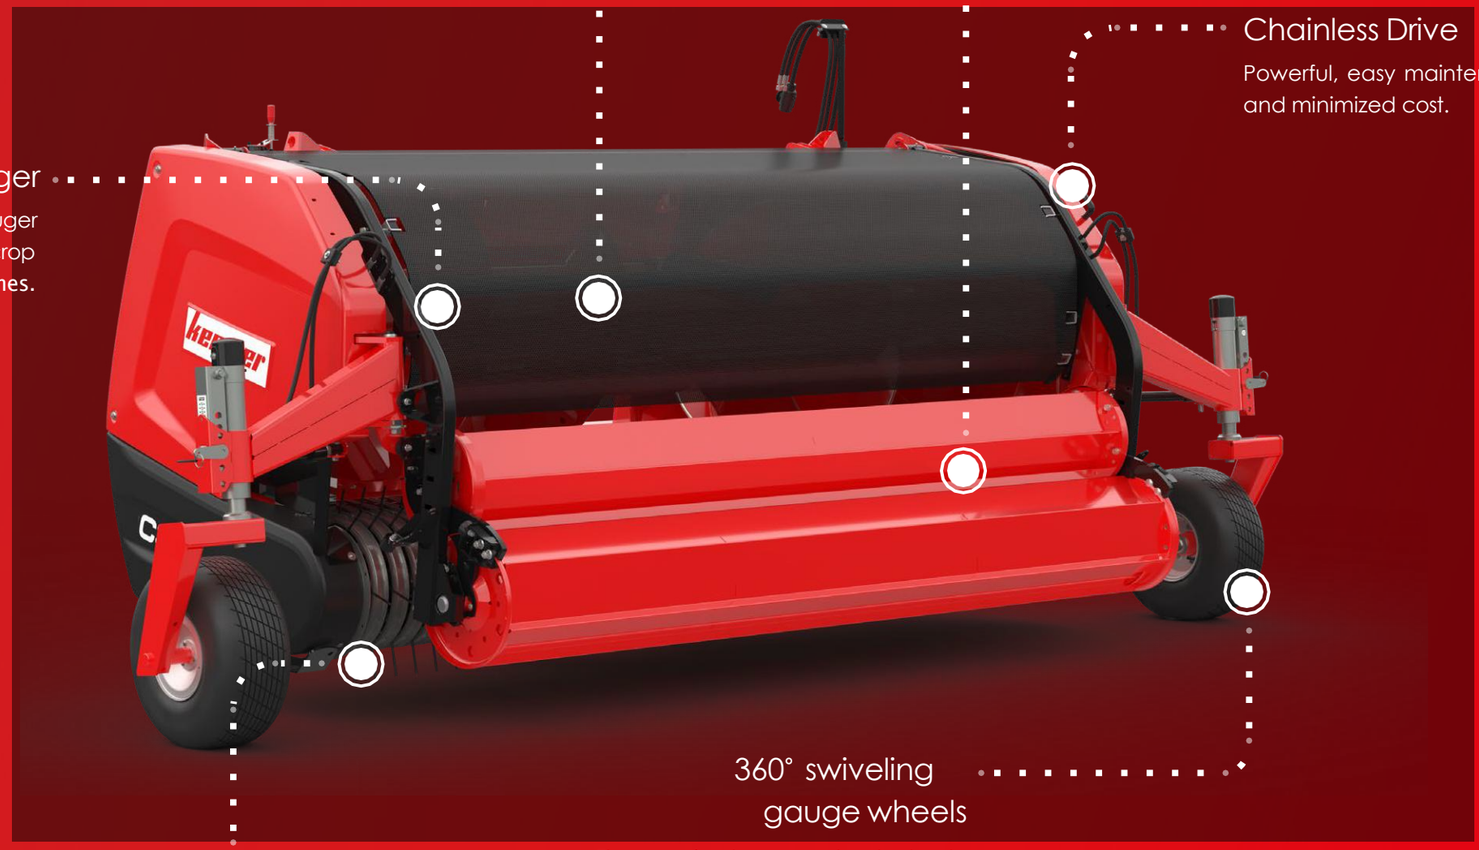

Thanks to pivoting double roll.

Chainless Drive

Powerful, easy maintenance and minimized cost.

Large-diameter auger

Large-diameter auger handles massive crop **volumes.**

Six tine bars

More tines to handle heavy crop.

360° swiveling gauge wheels

The oversized gauge wheels closely follow the ground contours. For better traction on slippery or wet soils.

HARVEST WITH CARE. PERFORM WITH POWER.

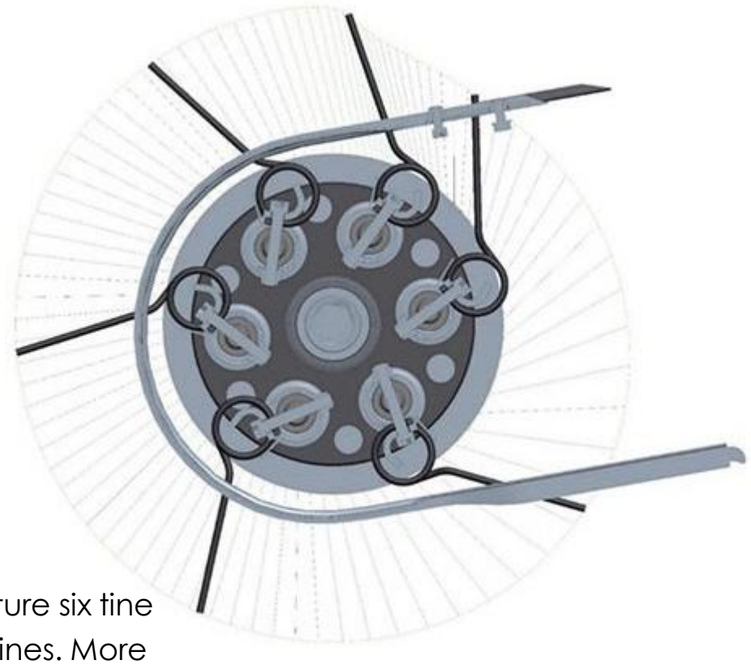

Uneven terrain? The C30 / C35 pick-up handles it with ease. The gauge wheels provide additional support on rough ground, ensuring smooth and consistent crop flow even under demanding conditions. Equipped with a massive pendulum frame and an automatic centering device, the C30 / C35 pick-up ensures optimal ground contact. This protects both your sward and your machine while maintaining high performance and reliability. True performance begins where intelligent design meets care for the land.

SMOOTH INTAKE. MAXIMUM OUTPUT.

Kemper pick-ups are characterized by their special auger design.

The C30 / C35 pick-up was developed for maximum throughput. Its 31.1 in. (79 cm) auger and 7.9 in. (20 cm) flighting handle large crop volumes with ease. The screw pitch of the auger flighting opens up towards the center to create a constant crop flow.

This reduces machine stress, improves fuel efficiency, and minimizes wear, allowing you to push performance to the limit.

Six tine bar pick-up reel

The C30 / C35 pick-ups feature six tine bars with 0.26 in. (6.5 mm) tines. More tines ensure a perfect job with no crop left behind, even in high yield conditions. A lower pick-up reel speed is also possible, reducing wear.

Auger

The large, sturdy intake auger with its robust 7.9 in. (20 cm) flighting offers the following features:

The auger has additional hard faced weld seams on the outer contour. The flighting's screw pitch gradually opens towards the center. It acts like a shovel guiding the crop into the forager in a perfectly safe and uniform manner.

Simple pick-up reversal

Simply keep the reverse button pressed. Power is transmitted smoothly through the gearbox while the pick-up tines give way easily thanks to the integrated freewheel mechanism. This makes reversing quick, easy and reliable.

RELIABLE PERFORMANCE IN TOUGH CONDITIONS

Easy on the soil

The lateral gauge wheels offer 360 degrees of swivel. This enables you to easily negotiate corners or edge-of-field U-turns without limitation and to actively protect your sward. The large-diameter tires provide excellent pick-up support on wet surfaces.

Support in uneven terrain

On extremely uneven fields, the wide center support wheels prevent the pick-up tines from piercing the ground by lifting the pick-up to avoid tine damage.

The wheels' smooth surface and dedicated scraper combine to prevent soil from sticking to the wheels or building up in front of the pick-up. This minimizes tine wear in uneven terrain and improves silage quality by picking up less contamination.

Lateral float control

The sturdy pendulum frame and its large gauge wheels combine to provide optimal ground-contour following, particularly on slopes. This results in less crop contamination and reduced wear costs.

Your benefits:

- Clean crop intake
- High durability
- Maximum throughput
- Adapt to all harvest conditions

DESIGNED FOR EVERY HARVESTING CONDITION.

The C30 / C35 pick-up is designed to ensure a smooth and consistent crop flow, even under challenging field conditions. Its double compression roll system keeps the crop reliably guided, especially in light or uneven windrows.

Maintenance has never been easier. There is no need for daily lubrication, and wear-related failures are significantly reduced, ensuring maximum reliability throughout the season.

Quick access for cleaning makes it simple to keep the machine in top condition, while the maintenance-free drive system eliminates the mess and hassle of traditional setups. The result is more uptime, less effort, and complete confidence that your equipment is ready when you are.

For extreme-ly dusty conditions.

Wide versatility.

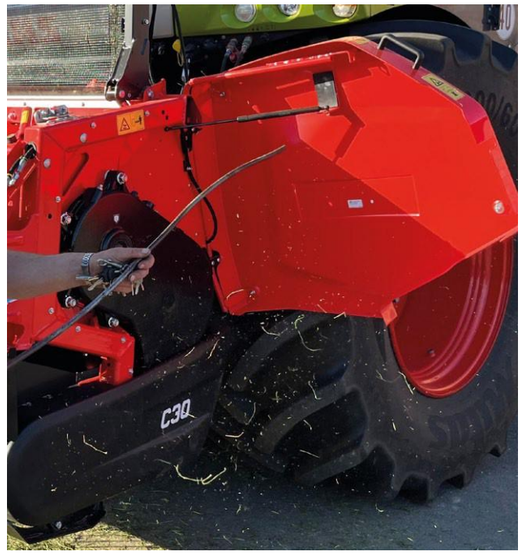

Even in wet crops.

Consistent Feeding in Challenging Windrows

The double compression rolls on the C30 / C35 pick-up ensure reliable crop guidance, even in light or uneven windrows.

The second roll is fixed against a stop on the main frame, keeping constant contact with the crop and directing it toward the pick-up tines. This setup maintains crop flow even when the first roll is lifted by a hump, helping to level irregular windrows and improve performance in wet or light conditions.

Chainless drive

The chainless drive system makes maintenance effortless. With a durable, maintenance-free gearbox, there's no need for daily lubrication or chain adjustments. No oily hands, no worn sprockets —just reliable, hassle-free performance and maximum uptime.

Optional Service Door for Simplified Cleaning

In dry harvesting conditions, the optional service door on the left-hand side of the header provides a convenient solution for maintaining cleanliness. Once manually released, the door opens automatically with the aid of a gas strut, allowing quick access to internal areas.

This feature simplifies routine cleaning by making it easier to remove accumulated crop residues.

CLEAN MACHINE.

The C30 / C35 pick-up features a full-width trash net that prevents crop material from building up in critical areas such as the intake channel and chopping drum. Its fine mesh keeps the machine cleaner during operation, reducing maintenance effort and down-time. This also helps keep cab windows clearer, ensuring better visibility and greater comfort throughout the working day.

QUICK HITCH. SMOOTH SWITCH.

The drive trains quick coupler allows for easy attachment of the pick-up.

The C30 / C35 pick-up features a quick coupler on the drive train for fast and easy attachment. On the left-hand side, a convenient latch simplifies hitching. When changing fields frequently, the gauge wheels fold hydraulically inward to save time. Once the pick-up is raised, the wheels automatically lock into transport position—without the operator needing to leave the cab.

PERFORMANCE WITH PURPOSE.

YOUR BENEFITS AT A GLANCE:

- Consistent utilization of the full machine potential even when working with powerful foragers.
- Smooth machine operation with no shock loads.
- Extremely sturdy component design throughout the header for high levels of reliability.
- Long service life provided by wear-resistant components in critical areas.
- Optimized ground-hugging capabilities for perfect crop intake. Full-width dust protection net for a clean machine.
- The chainless drive makes servicing this machine very easy. Easy change to transport mode without leaving the cab.

COMPELLING. EVEN IN NUMBERS.

Specification	C30	C35
Working Width	8 ft. 10 in. (2.70 m)	10 ft. 6 in. (3.20 m)
Transport Width	9 ft. 10 in. (3.00 m)	11 ft. 5 in. (3.49 m)
Weight	3,858 lbs. (1,750 kg)	4,079 lbs. (1,850 kg)
Number of Tines	6 x 60	6 x 80
Length	4 ft. 5 in. (1.35 m)	4 ft. 5 in. (1.35 m)
Height	4 ft. 9 in. (1.45 m)	4 ft. 9 in. (1.45 m)
Auger Diameter	31.1 in. (790 mm)	31.1 in. (790 mm)

SCHERER CAN DO EVEN MORE FOR YOU.

Scherer Inc. is the North American importer for Kemper heads, and a manufacturer in our own right. From kernel processors built in South Dakota to row-independent headers made in Germany, we sell, stock and service those components of your harvester.

Talk to our team about the right configuration for your crops and your machine: **schererinc.com** · 800.883.9790

400pro

Row-independent forager headers with a new support wheel and further innovations for maximum performance and comfort.

Scherer Kernel Processor

Built in Sioux Falls, South Dakota. Your solution for consistent processing through the whole forage harvest.

C-Series Pick-up

Setting new standards in windrowed crops with impressive performance and efficiency.

ALL'S WELL IF YOUR HARVEST GOES WELL.

Scherer Inc.

kemper

NORTH AMERICAN IMPORTER FOR KEMPER

Scherer Inc. brings Kemper row-independent headers and pick-ups into North America and stands behind them. Heads arrive at our Sioux Falls facility or your dealer, get set up for your harvester, and ship with the parts and knowledge to keep them running.

We have spent decades in the forage harvesting business building kernel processors for the machines that run these heads. That is the same experience you get on the phone: practical answers about crops, parts and service.

STOCKED IN SOUTH DAKOTA

Heads and wear parts on the shelf ready for harvest.

DEALER NETWORK

Backed by dealers across the country and a parts team that answers.

QUALITY FOR PROFESSIONALS.

The guiding principle behind every Kemper head — and the reason we import them.

IMPORTED BY SCHERER INC.

KEMPER HEADS · SOLD AND SUPPORTED BY SCHERER INC.

Know-how and experience are the foundation for innovative solutions and superior quality. For more than 100 years, Kemper has been designing, producing and distributing high-quality machinery for professionals on a global scale, and in North America Scherer Inc. is the importer that puts it in your yard.

To Kemper, Made in Germany is a lot more than just a label. Around 330 people work on the 100,000 square meter premises in Stadtlohn, in the mid-west of Germany, where development, customer support and production work in close cooperation to drive continuous improvement of the product. Scherer works the same way on this side of the ocean — and we work directly with the factory on the machines we sell.

100+
YEARS BUILDING HEADERS

No. 1
ROW-INDEPENDENT HEADERS

That factory experience reaches you through Scherer Inc.: pre-sales advice, setup for your harvester, wear parts on the shelf in Sioux Falls, and after-sales support from people who run this equipment themselves. One call covers the head, the kernel processor and everything behind them.
